

Documentation - Restaurant Reviewer

June 09, 2023

Features:

- This project will allow people to create an account and search for existing restaurants by rating. Each user will be able to have their own list of favorite restaurants that they can add or delete from. Users can add restaurants that do not currently exist.
- This project was made for students new to Santa Cruz that are looking for good food in the area rated by other students. When searching Google for food, the recommended searches are based on popularity without regard for expense. For example, we like poke, but found it scarce in Santa Cruz county; and all the places recommended were not that good. We were able to find some really good poke that still doesn't come up when we search for it :/
